

ERADICON PEST MANAGEMENT

COCKROACH TREATMENT

PREPARATION GUIDE

Your home is scheduled to be treated for cockroaches.

The treatment involves applying gel bait droplets in the crack and crevices throughout the home that the cockroaches will feed on, as well as an odorless liquid product to the baseboards and behind the appliances. There will be no fogging or fumes released into the air. **YOU WILL NOT HAVE TO LEAVE.**

The treatment is **SAFE**, in harmony with EPA label instructions, and poses no risk to your family or pets.

PRE-TREATMENT INSTRUCTIONS

- **Clean the kitchen thoroughly**, including the floor, counter tops and cabinets.
- **Remove food waste** or any other food source for cockroaches (dirty containers, crumbs, etc...)
- Pull out **both the refrigerator and the stove** and clean behind both.
- **Vacuum any live cockroaches** from behind the appliances and dispose of the bag.
- **Clean grease** that may have accumulated on the range hood, cabinets or wall.
- **Do not use any store-bought sprays or foggers before or after your treatment.**

POST-TREATMENT INSTRUCTIONS

- **DO NOT ALLOW CHILDREN OR PETS TO CONTACT TREATED SURFACES UNTIL DRY.**
- **Do not wipe the counters or mop the floor** where the product has been applied for 1 week.
- **Vacuum or clean up** dead cockroaches to help monitor activity level.
- **Keep food items in sealed containers** and remove waste that cockroaches could feed on.

Be patient! It may take up to 2 weeks for all cockroach activity to disappear.
